

YOUR DATA::OUTSIDE THE BOX

What is AiWorks?

Sample Applications Built With AiWorks:

- *Project Management & Ticketing System*
- *Inventory & Asset Management*
- *Data Aggregation & Visual Consolidation*
- *Dashboards & Data Analytics*
- *Content Management (paper & electronic)*
- *eCommerce & Sales Management*
- *Manufacturing*
- *Rules, Regulations & Compliance*

- Rapid Application Development Framework (RAD)
- Web framework used to create enterprise web solutions
- Connect solution to other 3rd party applications
- Interact simultaneously with several data sources (MS SQL, Oracle, MySQL, XML)
- Unified security, user management and audit trail
- Solutions are 100% web based running in major browsers (desktop or mobile devices)
- Advanced functionality and services (forms, reports, dashboards, graphs, workflows, data exchange...)
- Pricing and Promotions Strategies

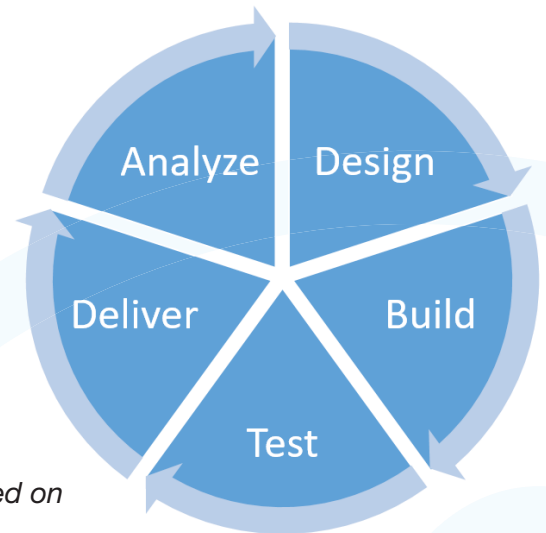

Agiline Rapid Application Development

Agiline RAD technology offers Enterprise Level Application Development using simple collection of tools to manage:

- *Business Modeling*
- *Allow for well managed flow of information*
- *Data Distribution between units using different systems and applications*
- *Data Modeling*
- *Create and Manage Data models that adapts to your need*
- *Define, configure and validate data objects and relationships*
- *Manage individual data sets from different data sources (view, edit, save, share)*
- *Application Generation*
- *Based on T-SQL, no additional coding or languages needed*
- *Build prototypes or final application housed internally or hosted on the cloud*

Advantages of Agiline RAD Technology

There are many advantages for using RAD Technology:

- *Agile solution development vs. Waterfall approach*
- *Reduced development time leading to increased productivity*
- *Participation of business stakeholders in the design and build process*
- *Measurable and quantifiable project progress*
- *Unified application interface, easy training and user adoption*
- *Allow for application version control, testing and single click deployment*
- *Integrates with several applications and data sources*
- *Steady Stream of new services following clearly defined roadmap*
